MULTI LEVEL STACKER WITH GANTRYX PALLETIZER – MEDIUM CAPACITY

Designed to overcome lack of space and manpower, this system facilitates the sorting of parts required for production by companies that cut and process wooden boards. Similar system could also be adapted for ripsaw application to sort boards by widths and grade before stacking.

TWO-ARM SWITCHING SYSTEM WITH SERVOMOTOR

5-LEVEL ACCUMULATION DECK SYSTEM

ELEVATOR PLATFORM

WARRANTY 1 YEAR

CHARACTERISTICS & OPERATION

The Multi Level Staves Sorting System with GANTRYX Stacker allows you to save floor space, to automate the whole process while increasing its speed, and to considerably reduce human intervention.

The system's main functions:

- Allows to sort and stack up to 20 pieces per minute coming out from the saw;
- Has a two-arm switching system with servo motor to direct parts to the proper accumulation level;
- Detects the widths and lengths of each pieces;
- Includes a sorting bin for non-compliant pieces;
- A 5-level accumulation deck system;
- Even-ending station with layer stretching mechanism to have both edges of the bundles at the desired width;
- GANTRYX stacker and palletizer.

To find out more about the GANTRYX, please see the product **information page**.

See The Multi Level Stacker with GANTRYX Palletizer in action in the video below.
